

The SCOPE mission

Masaki Fujimoto[1]

[1] ISAS, JAXA

After several years of PrePhaseA study by the WG at ISAS, the SCOPE mission has been proposed to the Space Science Steering Committee of ISAS. Here we review the proposed science objectives of the mission. All the major space agencies in the world are interested in collaborating in and/or with SCOPE. We also review how international collaboration can enhance the science objectives and show the ultimate shape of the international collaboration mission to come, which will trully elucidate the cross-scale coupling of space plasma dynamics and contribute to our fundamental understanding of the Plasma Universe.
